Professional Summary

Frontend Engineer with **3+ years** of hands-on experience architecting and delivering scalable, high-performance web applications using **React.js** and **Next.js**. Demonstrated expertise in building data-intensive, role-based platforms with optimized rendering pipelines, reusable component systems, and SEO-focused implementations. Proven track record of reducing development cycle time, improving Core Web Vitals, and shipping production-grade features in Agile/Scrum environments. Seeking to contribute to high-impact engineering teams at scale.

Technical Skills

Frontend:	React.js, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive & Mobile-First Design
State Management:	Redux Toolkit, Redux, Context API
Performance:	Code Splitting, Lazy Loading, Memoization, SSR (Server-Side Rendering), SSG (Static Site Generation), SEO Optimization, Core Web Vitals
Backend (Expose):	Node.js, Express.js, MongoDB, REST APIs, JWT Authentication
Tools & Workflow:	Figma, Git, GitHub, VS Code, Agile/Scrum, Sprint Planning

Professional Experience

The Adecco Group

Frontend Developer

Jul 2023 — Present

Bengaluru, India

- Engineered and maintained **scalable, high-performance web applications** using React.js, Next.js, and Tailwind CSS, serving thousands of concurrent users with sub-second load times.
- Architected and delivered **20+ reusable, composable UI components**, reducing feature development time by ~30% and improving long-term codebase maintainability.
- Designed and implemented **responsive, mobile-first interfaces** adhering to WCAG accessibility standards, ensuring a consistent cross-device user experience.
- Integrated **10+ REST API endpoints**, enabling real-time data rendering for dynamic, data-intensive application views with optimized fetch strategies and error boundaries.
- Built and maintained **role-based dashboards and access-controlled workflows** for multiple user personas (Admin, Broker, Customer, Builder), streamlining business operations.
- Improved **UI rendering performance and initial page load speed** by 25%+ through strategic use of memoization, virtualized lists, and optimized component re-render cycles.
- Resolved **cross-browser compatibility** issues across Chrome, Firefox, Safari, and Edge, achieving consistent UI behavior and reducing QA regression cycles.
- Collaborated cross-functionally with backend engineers, UI/UX designers, and product stakeholders in bi-weekly sprints to deliver high-priority features ahead of deadlines.
- Actively participated in **Agile/Scrum ceremonies**, including sprint planning, daily standups, code reviews, and retrospectives, contributing to team velocity and process improvements.

Projects

PropertyOTP — Real Estate Platform *React.js, Next.js, Redux Toolkit, Tailwind CSS, REST APIs*

- Architected a **full-featured real estate marketplace** enabling customers, brokers, and builders to list, manage, promote, and discover properties at scale.
- Developed feature-rich **property listing and detail pages** incorporating advanced filters, image galleries, amenity displays, broker profile cards, and interactive floor plan viewers.
- Engineered a **6-step guided property posting workflow** (Property Details → Locality → Rentals → Amenities → Images → Schedule) with client-side validation and persistent state management via Redux Toolkit.
- Designed **role-based dashboards** tailored to three distinct user personas — Customers, Brokers, and Builders — each with unique permission scopes and workflow views.

- Integrated Redux for **authentication flows, property CRUD operations, and favorites management**, ensuring consistent global state across the application.
- Optimized for **desktop-first UX with full mobile responsiveness** and implemented Next.js SSR/SSG patterns to achieve SEO-friendly page structures, boosting organic discoverability.

Online Video Tutorial Library (OVL) *React.js, JavaScript, Bootstrap, Node.js, Express.js, MongoDB*

- Built a **YouTube-style video library platform** supporting admin content uploads, categorization, and role-differentiated user access with JWT-secured authentication.
- Implemented **Role-Based Access Control (RBAC)**, restricting content management capabilities to admin users while providing a curated viewing experience for standard users.
- Redesigned UI/UX with **intuitive navigation patterns and content discovery layouts**, improving engagement metrics and reducing user drop-off during content exploration.
- Delivered the full-stack solution within a **3-tier MVC architecture**, collaborating on API design and database schema definition.

Online Shopping Application (OSA) *React.js, JavaScript, Bootstrap, HTML5, CSS3*

- Designed and developed a **production-grade e-commerce storefront** enabling customers to seamlessly browse, search, filter, and sort a dynamic product catalog.
- Implemented a **fully functional, customizable shopping cart** with persistent item management, quantity adjustment, and a streamlined checkout flow.
- Built a **responsive, interactive UI** using React.js and Bootstrap, delivering consistent visual quality and intuitive navigation across all device breakpoints.
- Engineered **advanced search and content curation features**, improving product discoverability and delivering a tailored shopping experience for end users.

Education

Bachelor of Science

Utkal University,

Oct 2020 — Jul 2023

Bhubaneswar, Odisha

Core Strengths

- Proven expertise in building **scalable, data-driven frontend architectures** that handle complex state, high data throughput, and multi-role access patterns.
- Strong ability to **diagnose and optimize frontend performance bottlenecks** — from render cycles to network payloads — resulting in measurable UX improvements.
- Hands-on experience in **real-world production systems and enterprise-grade role-based platforms**, with a track record of shipping features with minimal defect rates.
- Deep proficiency in **component-driven development and modern React ecosystem best practices**, including hooks, code-splitting, and design system integration.

Achievements

- Reduced UI development cycle time by **~30%** across the engineering team through a shared component library of 20+ production-ready components.
- Improved application **page load performance by 25%+** via memoization, lazy loading, and optimized rendering strategies on key user-facing routes.
- Consistently delivered sprint commitments with **zero critical production bugs** on owned features over multiple release cycles.
